                                                                                                The present invention provides the protein and coding sequences for the variable regions of human monoclonal antibodies which are immunoreactive with human immunodeficiency virus-1 (HIV-1) envelope glycoprotein gpl20. These can be used in diagnosis and therapy of HIV-1 infection.
                                                                                                                                                                                                                                                                                                                                                                 99

```
The present invention describes a method for detecting an analyte in a human sample containing human antibodies that specifically bind to antibodies from a nonhuman species. The method involves contacting the sample with a human antibody (1) which specifically binds to antibodies from a nonhuman species and detecting the binding between (1) and the analyte to indicate presence of the analyte. The method is used for detecting an analyte in a human sample containing human anti-mouse antibody (HAMA) (preferably human anti-mouse idiotype antibodies and/or heterophilic antibodies). The method can also be used for detecting any type of target antigen including bacterrial, fungal and viral pathogens that cause human diseases e.g., hepatitis (A,B and C), influenza, Herpes, Glardia, Malaria, Leishmania, Staphylococcus aureus, Pseudomonas that cause human antibodies can be used as detection reagents for performing clinical diagnostic tests and for performing other in virro detection assays, including for research purposes. (1) can be used in qualitative assays designed to indicate the presence of one or more target antigen in a sample that usually correspond to indicate table amounts of antigen in the sample that usually correspond to the sensitivity limitations of the sample that usually correspond to one or more target antigens in a sample can also be carried out using (1). AAH41612 to AAH41686, and AAB993161 to the present interest.

antibody phage display library (I), comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acids encoding antibody chains obstained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing a human antibody phage display library comprises providing a transgenic animal whose genome comprises human immunoglobulin genes and isolating nucleic acids encoding antibody chains from lymphatic cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      display library using this method means there is no need to immunise humans with antigens, and the difficulties faced with immortalising B cells are avoided. The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stromal fibroblasts, such as colorectal cancer, non-small-cell lung cancer, breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder cancer, pancreatic cancer and metastatic brain cancer, and diseases

                                                                                                                                           The present invention relates to a human or humanised antibody (Ab) which specifically binds to fibroblast activating protein alpha (FAPalpha). The antibodies are useful for preparing a composition for the treatment of cancer, and for imaging tumours associated with activated stromal fibroblasts, such as colorectal cancer, non-small-cell lung cancer, breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder cancer, pancreatic cancer and metastatic brain cancer, and diseases associated with the same, such as inflammation and wound healing. The present sequence is a coding sequence described in the exemplification of

```
throughput generation and screening of a human antibody or immunoglobulin (Ig) library in yeast. The method comprises expressing a library of tester fusion proteins in yeast cells, each tester fusion protein comprises expressing a library of tester fusion protein activation domain or a DNA binding domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, VH) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable light-chain, VL) whose sequence varies within the library independently of the first polypeptide, and a linker peptide which links the first of second polypeptide subunits. The method is useful for generating with target antigens. The present DNA sequence represents an anti-ILB serv clone as described in the methods of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        239

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to compositions and methods for high throughout generation and screening of a human antibody or immunoglobulin (Ig) library in yeast. The method comprises expressing a library of tester fusion proteins in yeast cells, each tester fusion protein comprising either an activation domain or a DNA binding domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, WH) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable heavy-chain, WH) whose sequence varies within the library independently of the first polypeptide subunits. The method is useful for generating second polypeptide subunits. The method is useful for generating with target antigens. The present DNA sequence represents an anti-ILB scrv clone as described in the methods of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 TGTGCAGCCTC-GGATTCACCTTTACTAGGAATCCTACGAGCTGGGTACGCCAGGCTCCA 119

The present invention relates to compositions and methods for high throughput generation and screening of a human antibody or immunoglobulin [1g) library in yeast. The method comprises expressing a library of rester fusion proceins in yeast cells, each tester fusion protein comprising either an activation domain or a DNA binding domain of a transcription activator and a tester protein having a large diversity within the library. The tester protein comprises a first polypeptide subunit (e.g. human variable heavy-chain, VI) whose sequence varies within the library, a second polypeptide subunit (e.g. human variable light-chain, VI) whose sequence varies within the library independently of the first polypeptide subunits. The method is useful for generating second polypeptide subunits. The method is useful for generating recombinant human antibodies and screening for their affinity binding with target antigens. The present DNA sequence represents an anti-lib screw soft invention.

                                                                                                                                                                                                    A series of genes (AAO78919-79002) encoding human immunoglobulin variable heavy chains. The genes were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers AAO78917-38. The genes are subdivided into 5 families of Wh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially dispsted with Tag1 restriction enzyme. The fragments were sparated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with Cla1-digested cosmid vector pUBBI. The ligation products were in vitro packed and infected into E.coli 490A. The tragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            406

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                   The present invention describes human Apo-2. Apo-2 can be used therapeutically to induce apoptosis in mammalian cells, and so is useful to treat conditions associated with decreased apoptosis e.g. cancer.

Apo-2 is believed to be a new tumour necrosis factor (TNP) receptor.

The cytokines can induce apoptosis, thought to be initiated by binding to TNFRs, and Apo-2 triggered caspase-dependent apoptosis. It can be used to identify agents activating Apo-2, useful to treat therapeutically (e.g. those containing immunoglobulin sequences can be therapeutically (e.g. those containing immunoglobulin sequences can be inhibit apoptosis) or diagnostically (e.g. those comprising anti-tag cantbodies). It can be used to produce antibodies which can be combined with a (particularly pharmaceutically (e.g. those comprising anti-tag cantbodies). It can be used to produce antibodies which can be combined to the used to produce antibodies which can be combined or used to produce dimeric molecules (especially homodimeric molecules comprising first and second Apo-2 antibodies). Agonistic (especially cor used to produce administered to induce apoptosis in mammalian cancer cells, and antegonistic antibodies used to block mammalian cancer cells, and antegonistic antibodies used to block antibodies may also be used diagnostically e.g. to detect Apo-2 excession in cells/tissues and in Apo-2 purification. The present correct antibody, designated 20E6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a single-chain Apo-2 antibody, designated 20EG, which is isolated from a phage library. It is believed that Apo-2 is a member of the tumour necrosis factor receptor (TNER) family. Apo-2 polypeptide is capable of triggering caspase-dependent apoptosis and activating nuclear factor-kappa B. A soluble extracellular domain of Apo-2 binds Apo-2 ligand (Apo-21). Apo-2 antibodies may be used to activate or stimulate apoptosis in cancer cells. They are therefore especially useful in the treatment of cancer, to enhance immune-mediated cell death in cells expressing Apo-2, to affinity purification of Apo-2 in specific cells, tissues or serum, and in solurces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GIGCAGCIGGIGGAGICIGGGGGAGGCTIGGTCCAGGCCTGGGGGGGTCCCTGAGACTCTCC

The present invention provides the protein and coding sequences for human monoclonal antibodies which bind specifically to the HER2/neu growth factor receptor (also known as erbB2). These are designated 3-F2, 1-D2 and 2-B8. They can be used in the immunotherapy-based treatment and prognosis of cancers, particularly adenocarcinomas such as salivary gland, stomach, kidney, mammary gland, lung and squamous cell carcinomas, and ovarian cancer. The present sequence is a coding sequence of an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a molecule that binds MCP-1 (human monocyte chemoattractant protein-1). The molecule has at least one antigen chinding site comprising at least one immunoglobulin (Ig) heavy and/or light chain variable domain (Wh, VI). The antibody of the invention preventing binding of MCP-1 (and also eccasin) to specific receptors, so preventing migration of monocytes and T cells. These are human artibodies with very high affinity for MCP-1, but no significant reaction with other human CC-type chemokines or MCP-1 from other species. The MCP-1 binding molecules, specifically antibodies that cross
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New compound that binds human monocyte chemoattractant protein-1, useful e.g. for treating inflammation, comprises immunoglobulin chains with specific hypervariable regions

react with ectaxin, are used to prevent or treat MCP-1 or ectaxin-
mediated disorders, particularly those that involve migration or
activation of monocytes and T cells, e.g. allergies (allergic rhinitis,
hypersensitivity responses, allergic context dermatitis), inflammatory
diseases (asthma, psoriasis, COPD, inflammatory bowel disease,
multiple sclerosis) autoimmune diseases of bone and cartilage
systemic lupus erythematosus), diseases of bone and cartilage
(disorders (haemolytic anaemia, idiopathic thrombocytopaemia) graft
rejection, cancers that include leucocyte infiltration, (re)stenosis,
arteriosclerosis, osteoporosis and many other diseases listed in the
specification. The present sequence represents the human AAV293
anti-(MCP) antibody heavy chain cDNA sequence of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 67, P

) Sequence 89, Application US/09240274

) Sequence 89, Application US/09240274

) Patent No. 6255455

) GENERAL INFORMATION:

) APPLICATION: Stepel, Donald L.

) TITLE OF INVENTION: Rh(D)-BINDING PROPEINS AND MAGNETICALLY ACTIVATED CELL

) TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

) TITLE OF INVENTION: BOSTON SORTING METHOD FOR PRODUCTION THEREOF

) CURRENT APPLICATION NUMBER: US/09/240,274

) CURRENT FILING DATE: 1999-01-29

) EARLIER PILING DATE: 1996-04-10

) EARLIER FILING DATE: 1996-10-11

) NUMBER OF SEQ ID NOS: 224
